WORK EXPERIENCE

System 811 • Website prototype

Volunteer Product & UX/UI Designer | 06/2025 —Present

A logistics management system for coordinating requests, suppliers, volunteers and assignments during routine and emergency operations.

- Designed the end-to-end UX/UI, including interfaces and operational dashboards, for a system used by real clients.
- Translated organizational requirements into user flows, interaction logic and system behavior in collaboration with developers.
- Designed the organization's website, from information architecture and user journeys to final UI and visual design.

SELECTED PROJECTS

NUMI • Case study

Game Designer & UX/UI Designer

A 2D narrative puzzle platformer about memory loss, where players rebuild lost memories through exploration and object based puzzles.

- Led the full project from the first idea through development, including the story, gameplay, visual style, UX/UI and player experience. Worked with a freelance programmer and composer.
- Designed and illustrated all five memory worlds, including environments, characters, objects, puzzles and animations.
- Created the main game mechanics using grabbing, moving, rotating and resizing objects. Built controls for both gamepad and keyboard.
- Built and improved the gameplay, level logic and UX/UI based on player testing and feedback.
- Used ChatGPT and Codex to support scripting, technical work and problem solving in Unity.

Presented at Animix at the Tel Aviv Cinematheque and featured in an interview with Danny Rup on Israel's Channel 10. Selected to be included in the Israeli Sifriya platform and currently being prepared for release on Steam.

We Live Happily Here • Case study

Cooperative Mobile Game System | Unity | Academic Project

A cooperative mobile system for families that uses short shared games to encourage communication and teamwork between siblings.

- Built the full UX/UI, including user flows, invitations, navigation, feedback and the overall visual language.
- Designed the system for both parents and children, making it clear and practical for parents while keeping the experience easy and engaging for kids.
- Designed two cooperative games informed by research into family dynamics and sibling interactions.
- Designed the full game experience, including gameplay, interactions, illustrations, animations, feedback and visual elements.
- Built two playable prototypes in Unity, using Codex to support development and technical problem solving.

EDUCATION

B.Des. Visual Communication Design

HIT — Holon Institute of Technology | 2022—2026

SKILLS

Game Design:

- Game mechanics
- Level design
- Narrative design
- Gameplay design

Product Design:

- UX/UI design
- User flows
- Information architecture
- Wireframing
- Prototyping
- Dashboards
- Product requirements

Visual & Motion:

- Illustration
- Character and
- Environment design
- Visual storytelling
- Animation

Development:

- Gameplay logic
- UI implementation
- Input systems
- Unity prototyping

AI Tools:

- ChatGPT
- Codex for scripting, debugging and technical problem solving

Tools:

- Unity
- Figma
- Illustrator
- Photoshop
- After Effects
- InDesign.

LANGUAGE

- Hebrew: Native
- English: Professional working proficiency
